News Release

AUVINET, begins Phase 4 and 5 of \$5 Million International Contract for its AUVINET DVS Digital Video Surveillance System.

Ottawa, Ontario – November 20, 2001 - AUVINET, a leading digital video surveillance software company, today announced that it has received an additional \$1.5 million to begin Phase 4 and 5 of its AUVINET DVS (Digital Video Surveillance) System implementation to enhance corporate security systems for a major stock exchange. The total contract, worth \$5 million, highlights AUVINET's growth in the international video surveillance market.

The AUVINET DVS System increases security effectiveness and minimizes data storage costs, while managing incoming data and ensuring efficient access to stored video. Its components include software that enables surveillance professionals to view live video remotely from a desktop as well as simultaneously manage multiple-site surveillance. In addition, the AUVINET line of video surveillance software allows security personnel to control multiple alarms, sensors and cameras remotely. The AUVINET DVS System is able to archive video images on Magneto Optical WORM (Write Once Read Many) and Rewriteable media, RAID, and writeable DVD.

"With this contract, AUVINET continues to expand its global market presence," said Al Shaath, CEO of AUVINET. "This client works in areas that are highly vulnerable to security breaches. Based on our expertise in storage, and 12 years of R&D for AUVINET DVS alone, we've significantly raised the bar for quality, reliability and usability of digital video surveillance and management systems. For surveillance professionals, AUVINET DVS makes it easier and faster to retrieve and analyze necessary video footage."

A key component of the AUVINET DVS System is remote administration capability which reduces the need for on-site staff and surveillance related travel. The server records and transmits video data from industry standard CCTV and PTZ cameras, monitors alarm sensors and controls external devices.

Additionally, this line also includes software that enables security professionals to more efficiently view and manage both live and recorded surveillance footage. The AUVINET DVS System, allowing the operator to view and immediately manage video footage on their desktop computer. Users can remotely control alarm sensors and external devices, and simultaneous view up to 32 cameras. Other video footage viewing features include freezing and saving images, video window mapping, fast frame rate as well as search and retrieval functions.

AUVINET also supplies an AUVINET DVS Stand Alone System, which is an all-in-one Video Management System for installation where onsite video monitoring and recording are required.

About AUVINET

The progressive nature of AUVINET technology provides the environment for new and innovative approaches to industry problems. AUVINET has taken advances in hardware and applied the necessary creative energy to produce the tools needed to effectively manage digital video surveillance technology. In addition, AUVINET has taken the lead in alarm processing and management, producing proprietary hardware and software to support industry demands. AUVINET DVS is used by public safety organizations, financial institutions, industrial facilities, transportation facilities, warehouses, health care, legal protection, and retail outlets. For additional information on our AUVINET DVS software, visit our web site at www.auvinet.com.
